Coca-Cola Cherry Float | Synthetic PRD

A. Document metadata and authority

Product: Coca-Cola Cherry Float. Version: 0.3 (draft for owner review). Fictional document owner: Product Manager. Status: Synthetic educational scenario. Scenario designation: Fictional pre-launch planning exercise; no simulation date is set.

This Product Requirements Document is independently authored synthetic material for an educational Agentic AI simulation. It does not represent actual Coca-Cola product requirements, internal decisions, research, or development plans.

Authority: This PRD defines hypothetical product intent, proposed requirements and objectives. The approved Product Brief v0.2 supplies publicly supported product characteristics and factual claims. Requirements and acceptance criteria are illustrative and untested; they do not establish delivered capabilities or approved claims. Flag discrepancies rather than overriding product evidence with intent.

Evidence timing: The Product Brief uses retrospective public research accessed on 2026-11-04. This exercise does not reconstruct actual Coca-Cola development or certify what was knowable at an earlier pre-launch date.

B. Product opportunity / problem statement

Synthetic hypothesis: Adults who enjoy cherry-flavored soda may welcome a cherry-and-vanilla option evoking a familiar float experience. The opportunity requires consumer validation.

Market & Competitive Context

Retrospective public research accessed on 2026-11-04 informs this simulation; it does not establish what a Product Manager knew at an unspecified earlier planning date.

- Pepsi Wild Cherry & Cream combines cherry and vanilla flavors, with regular and zero-sugar versions, positioned as an indulgent treat (PepsiCo release, 2025-01-14).

- Dr Pepper Strawberries & Cream combines its signature flavor blend with strawberry and a creamy finish, with original and zero-sugar versions, positioned as a beverage treat (Keurig Dr Pepper release, 2023-05-03).

Product opportunity: fruit-and-cream beverages already exist, and cherry/vanilla alone is not unique. Differentiation hypothesis: emphasize classic soda-float inspiration and Coca-Cola identity (PROD-002, PROD-003), without claiming flavor exclusivity, superior taste or consumer preference.

C. Product vision and objectives

Product vision: Offer a recognizable cherry-and-vanilla soda experience with clear variant information. Objectives: expand flavor choice; explore nostalgic float inspiration; enable distinct, evidence-supported product positioning.

D. Target consumer

Synthetic targeting hypotheses: Primary - adults who already enjoy cherry-flavored soda and are open to flavor exploration. Secondary - adults interested in nostalgic float-inspired flavors. Neither segment is validated research; no demographic, purchasing or preference findings are claimed. PROD-010 describes publisher messaging, not proof of these segments.

E. Proposed product requirements (synthetic intent)

REQ-001 - Flavor direction. Propose a cherry-and-vanilla flavored soda concept (PROD-001, PROD-002). Illustrative acceptance: the concept specification describes both notes and identifies the product as soda; any sensory validation remains outstanding.

REQ-002 - Variants. Propose original/full-sugar and zero-sugar options, consistent with documented variants (PROD-004). Illustrative acceptance: the variant list names each separately; no nutrition, health or formulation equivalence is inferred.

REQ-003 - Packaging choices. Keep package selection market-specific. PROD-005 supports U.S. listed sizes; PROD-006 does not assign corporate formats market by market. Illustrative acceptance: each proposed SKU has a market and evidence reference, or is marked unresolved; no pack is treated as available everywhere.

E. Proposed product requirements (continued)

REQ-004 - Consumer information. Propose clear variant, serving and market identification. Illustrative acceptance: draft product-information fields identify their scope; missing values stay unresolved and no nutrition or ingredient claim is inferred from the variant name. Label compliance remains unverified.

REQ-005 - Inspiration and positioning. Propose float-inspired positioning consistent with PROD-003. Illustrative acceptance: the proposed positioning input describes inspiration without asserting dairy content, health benefit, superior taste or measured consumer demand.

REQ-006 - GTM handoff. Prepare product evidence and open questions for later PMM planning. Illustrative acceptance: each factual handoff statement resolves to a valid PROD ID with its market, variant and date limitations; synthetic objectives and audience hypotheses remain visibly labeled.

REQ-007 - Availability boundary. Require a scenario-specific market and readiness decision before asserting availability in the simulation. Illustrative acceptance: for a given geographic market and date, the system may state availability only when both the fictional Launch Calendar and Readiness Tracker support the claim. If either source is missing, inconclusive, restricted or blocks availability, the system must withhold the claim and identify the unresolved or blocked condition for that market and date. Public announcements alone do not establish current inventory or launch authorization.

F. Scope and exclusions

Scope: concept direction, proposed variants, package-selection constraints and product-information inputs for later GTM planning. Geographic availability is an open launch-planning decision; no region, launch date or approval is selected.

Excluded: new flavors or variants beyond the two documented options; new formulations, manufacturing specifications, pricing, distribution commitments and campaign copy. Diet Coke Cherry is a separate product, not a Cherry Float variant.

G. Illustrative success criteria (not measured)

SC-001 - Consumer clarity: a future concept review would assess whether participants can explain the intended flavor experience and distinguish variants; method and decision threshold remain open.

SC-002 - Information consistency: a future review would check that product descriptions preserve claim scope and clearly separate synthetic intent from evidence.

SC-003 - Planning completeness: a future readiness review would resolve or explicitly defer market-specific SKUs, claim approvals and availability questions before a simulated launch decision.

H. Dependencies, assumptions and open questions

Dependencies: Product Brief and claim-source manifest for product evidence; target-market and packaging decisions; fictional Launch Calendar and Readiness Tracker for date-specific availability and readiness.

Open questions: Which market and packages should the simulation cover? How should the targeting hypotheses be tested? Which claims would be selected for hypothetical approval? What fictional dates and readiness gates should later datasets define?

Evidence references: data/public_sources/coca_cola_cherry_float_product_brief.md (v0.2), data/public_sources/product_source_manifest.csv and docs/planning/m1.1-product-brief-review.md. PROD references retain the source scope and limitations; source support is not independent product testing.
