Coca-Cola Cherry Float | Product Brief

A. Document metadata

Product: Coca-Cola Cherry Float; includes its documented Zero Sugar variant.
Document version: 0.2 | DRAFT - OWNER REVIEW PENDING.
Research/access date: 2026-11-04.
Scenario designation: Independent fictional pre-launch simulation.
Source classification: Publicly verified product information (source-supported; not independent product testing).
Evidence domain: PRODUCT_TRUTH. No simulation dates, readiness decisions or launch approvals are supplied.
Temporal boundary: this is retrospective research using live and dated public sources. The fictional exercise is set before the February 2026 rollout; its precise simulation date is unspecified. This brief does not certify what was knowable at that earlier date. A 2025 public notice already names the product (PROD-014).

B. Product overview

The documented product is a flavored soda with cherry and vanilla notes, inspired by classic soda floats (PROD-001 to PROD-003). These are publisher-supported descriptions, not taste-test findings. Diet Coke Cherry is a separate product and must not be treated as the Zero Sugar Cherry Float variant.

C. Product features and characteristics

The claim register records the two variants, U.S. sizes, announced multipack formats and pack design (PROD-004 to PROD-007). Nutrition statements are tightly scoped: PROD-008 covers the U.S. original 12 fl oz can; PROD-009 covers the U.S. Zero Sugar 20 fl oz bottle. Neither statement transfers to another variant, pack or market. No allergy, health-benefit or formulation equivalence is inferred.

D. Target consumer context

Official materials address cherry-flavor fans and interest in nostalgic float flavors (PROD-010). This does not establish audience age, income, lifestyle or purchase intent. No campaign persona or audience hypothesis is asserted; those belong to the later PMM Brief.

E. Brand and product positioning context

The source messaging combines familiar float inspiration with flavor choice. Treat this as publisher positioning, not independent proof of superiority, demand or performance (PROD-003, PROD-004, PROD-010). Availability statements retain their market and source qualifications (PROD-011 to PROD-015).

F. Product claim register

SOURCE_SUPPORTED means the cited official source supports the scoped statement. QUALIFIED_SOURCE_STATEMENT records a dated or regional publisher statement with limitations; it does not verify actual rollout or current availability. All claims are PRODUCT_TRUTH evidence; owner acceptance is pending. The CSV provides per-source locators and limitations.

PROD-001 | SOURCE_SUPPORTED | S2. Cherry Float is a flavored Coca-Cola soda.

PROD-002 | SOURCE_SUPPORTED | S2, S3. The documented flavor combines cherry with vanilla notes.

PROD-003 | SOURCE_SUPPORTED | S1, S3. Its concept is inspired by classic soda floats.

PROD-004 | SOURCE_SUPPORTED | S1, S2, S3. Original/full-sugar and zero-sugar variants are documented.

PROD-005 | SOURCE_SUPPORTED | S2. The U.S. product page lists 12 fl oz and 20 fl oz sizes for both variants.

PROD-006 | SOURCE_SUPPORTED | S1. The corporate release lists 12-pack 12-ounce cans and 20-ounce bottles without assigning those formats market by market.

PROD-007 | SOURCE_SUPPORTED | S1, S4. The announced pack design uses red, pink/purple gradients and a float illustration.

PROD-008 | SOURCE_SUPPORTED | S2. The U.S. original-variant label lists 150 calories and 42 g total sugars per 12 fl oz can.

PROD-009 | SOURCE_SUPPORTED | S2. The U.S. Zero Sugar label lists 0 calories and 0 g total sugars per 20 fl oz bottle.

PROD-010 | SOURCE_SUPPORTED | S1, S3. Official messaging addresses cherry-flavor fans and interest in nostalgic float flavors.

PROD-011 | QUALIFIED_SOURCE_STATEMENT | S1. The February 2 corporate release announces a February 2026 start for a wider cherry-portfolio rollout across the U.S. and Canada. This is not an isolated Canadian Cherry Float date.

PROD-012 | QUALIFIED_SOURCE_STATEMENT | S4. The Canada release separately specifies March 2026 for Cherry Float and February 2026 for Diet Coke Cherry.

PROD-013 | QUALIFIED_SOURCE_STATEMENT | S3. The February 9 Great Britain release describes both variants as permanent from February 2026.

PROD-014 | QUALIFIED_SOURCE_STATEMENT | S5. A corporate notice dated in 2025 already names Cherry Float and a February 2026 debut.

PROD-015 | QUALIFIED_SOURCE_STATEMENT | S4. The Canada release describes Cherry Float as a limited-time offering.

Mandatory qualification: S1 gives broader portfolio timing; S4 separately specifies March 2026 for Cherry Float and February 2026 for Diet Coke Cherry in Canada. This difference in specificity does not establish a direct conflict or actual shelf arrival. Permanent Great Britain and limited-time Canada wording are regional. No fictional readiness or approval is established. Preserve the CSV limitations when using a claim.

G. Unknown or unverified information

Commercial gaps: no Cherry Float price by market/pack, sales forecast, market share, conversion claim or comparative performance claim is verified by this brief.

Regional gaps: actual store inventory and first shelf-arrival dates are unverified. No India source is included; absence of evidence does not establish unavailability or a legal restriction. No global availability duration is established.

Product limits: no cross-market ingredient equivalence, allergen certification, health benefit or regulatory approval is verified. Nutritional values beyond the two identified U.S. label statements are outside this claim set.

Simulation boundary: the later PMM Brief, Launch Calendar and Readiness Tracker must identify fictional assumptions separately. This brief supplies no market readiness state, launch authorization or invented schedule.

H. Source references

All five sources are official Coca-Cola pages accessed on 2026-11-04. Publication dates below are publisher dates, not inferred access dates. Numeric dates with unresolved ordering are preserved verbatim. No original articles, images or logos are reproduced.
